11-5-87

Dear BILL,

WADS is pleased to verify your recent reception report of 5/1/87. WADS broadcasts on 690 kHz from a directional antenna system in Derby, Ct., consisting of two 280' towers, spaced 90 electrical degrees, producing a hypercardiod pattern shape on a bearing of 160° true. WADS operates at a power of one thousand watts between local sunrise and sunset, and at various other powers between 35 and 430 watts, adjusted monthly, during PreSunrise, PostSunset, and nighttime hours. Past reception reports spanning the region from Boston, Ma. through St. Louis, Mo. have mentioned WADS's adult oriented music, local and national news and sports, and business and entertainment feature programming.
